DOORS & WARDROBES

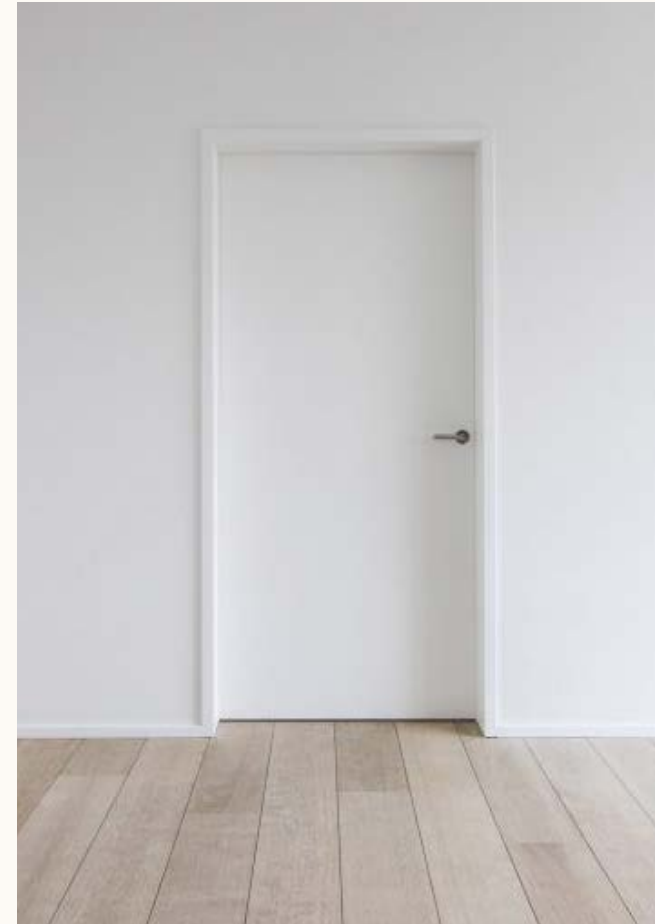

ENTRANCE DOOR

Aluminum door, smooth finish in RAL color to be defined by the supervising authority, with thermal break for doors leading to the exterior, featuring a handle with an aluminum bar.

INTERIOR DOORS

Swing doors lacquered in white with chrome handles. A lock will be installed on the bathroom doors.

WARDROBES

In the bedrooms, a modular wardrobe will be installed with smooth swing doors, lacquered in white and internally lined with textile-colored melamine finish, including a top shelf and hanging rail.

Installations

EFFICIENCY AND COMFORT

DOMESTIC HOT WATER AND AIR CONDITIONING.

Domestic hot water production will be carried out using a high-efficiency heat pump (aerothermal) with remote control capability. For air conditioning, a direct expansion heat pump system will be employed, distributing air through ducts to living rooms, kitchens, and bedrooms, with temperature control via a thermostat located in the living room. This combined system, which captures up to 75% of energy from the air, combined with a highly efficient building envelope, allows for an A energy rating, resulting in effective energy savings. The best solution for achieving maximum comfort with maximum energy efficiency.

PLUMBING

The interior installation of cold water will be with cross-linked polyethylene pipes, with insulation for hot water pipes and shut-off valves for wet rooms. Bithermal connections will be installed for the washing machine and dishwasher, avoiding water heating by electric resistance.

SANITATION

The downpipe and drainage network of the residences will be executed in PVC, with acoustic insulation. All fixtures will have individual traps or accessible trap chambers.

VENTILATION

Ventilation in the rooms of the residences will be carried out through an extraction system for wet rooms, which will extract stale air from bathrooms and kitchens through a network of ducts. Fresh air will be supplied to dry rooms through micro-ventilation units located in window frames. There will be a separate duct for all kitchen extractor hoods extending to the roof, preventing odor transmission between residences.

ELECTRICITY AND TELECOMMUNICATIONS

The electrical installation will be designed with a high level of electrification, intended to meet current demand needs and future expansion of systems or technology. Switches and mechanisms will be Simon 270 model in black or white from SIMON or similar, known for revolutionary usability and aesthetics, combining form and functionality seamlessly. Video intercom system. Telecommunications installation with RJ45 sockets, TV outlets in the living room and bedrooms according to the telecommunications project.

Common area lighting will use LED luminaires and presence detectors. Pre-installation of electric vehicle charging points for each parking space.

Swimming pool & Spa

CENTRAL POOL

Laguna Suites features a main outdoor saltwater pool and sunbathing area.

SPA & PISCINA INDOOR

The residential complex features an exclusive spa designed to provide a space for relaxation and well-being. Among the amenities, you can enjoy a variety of services including sauna, hot and cold showers, and a solarium, all carefully designed to offer a tranquil escape from the daily hustle and bustle.

POOL & CHILL OUT

The project includes a second outdoor pool focused on relaxation and disconnecting. Additionally, the chill-out area enhances this experience, providing a serene space to unwind and socialize with friends and neighbors in a unique environment that encourages rest and rejuvenation.

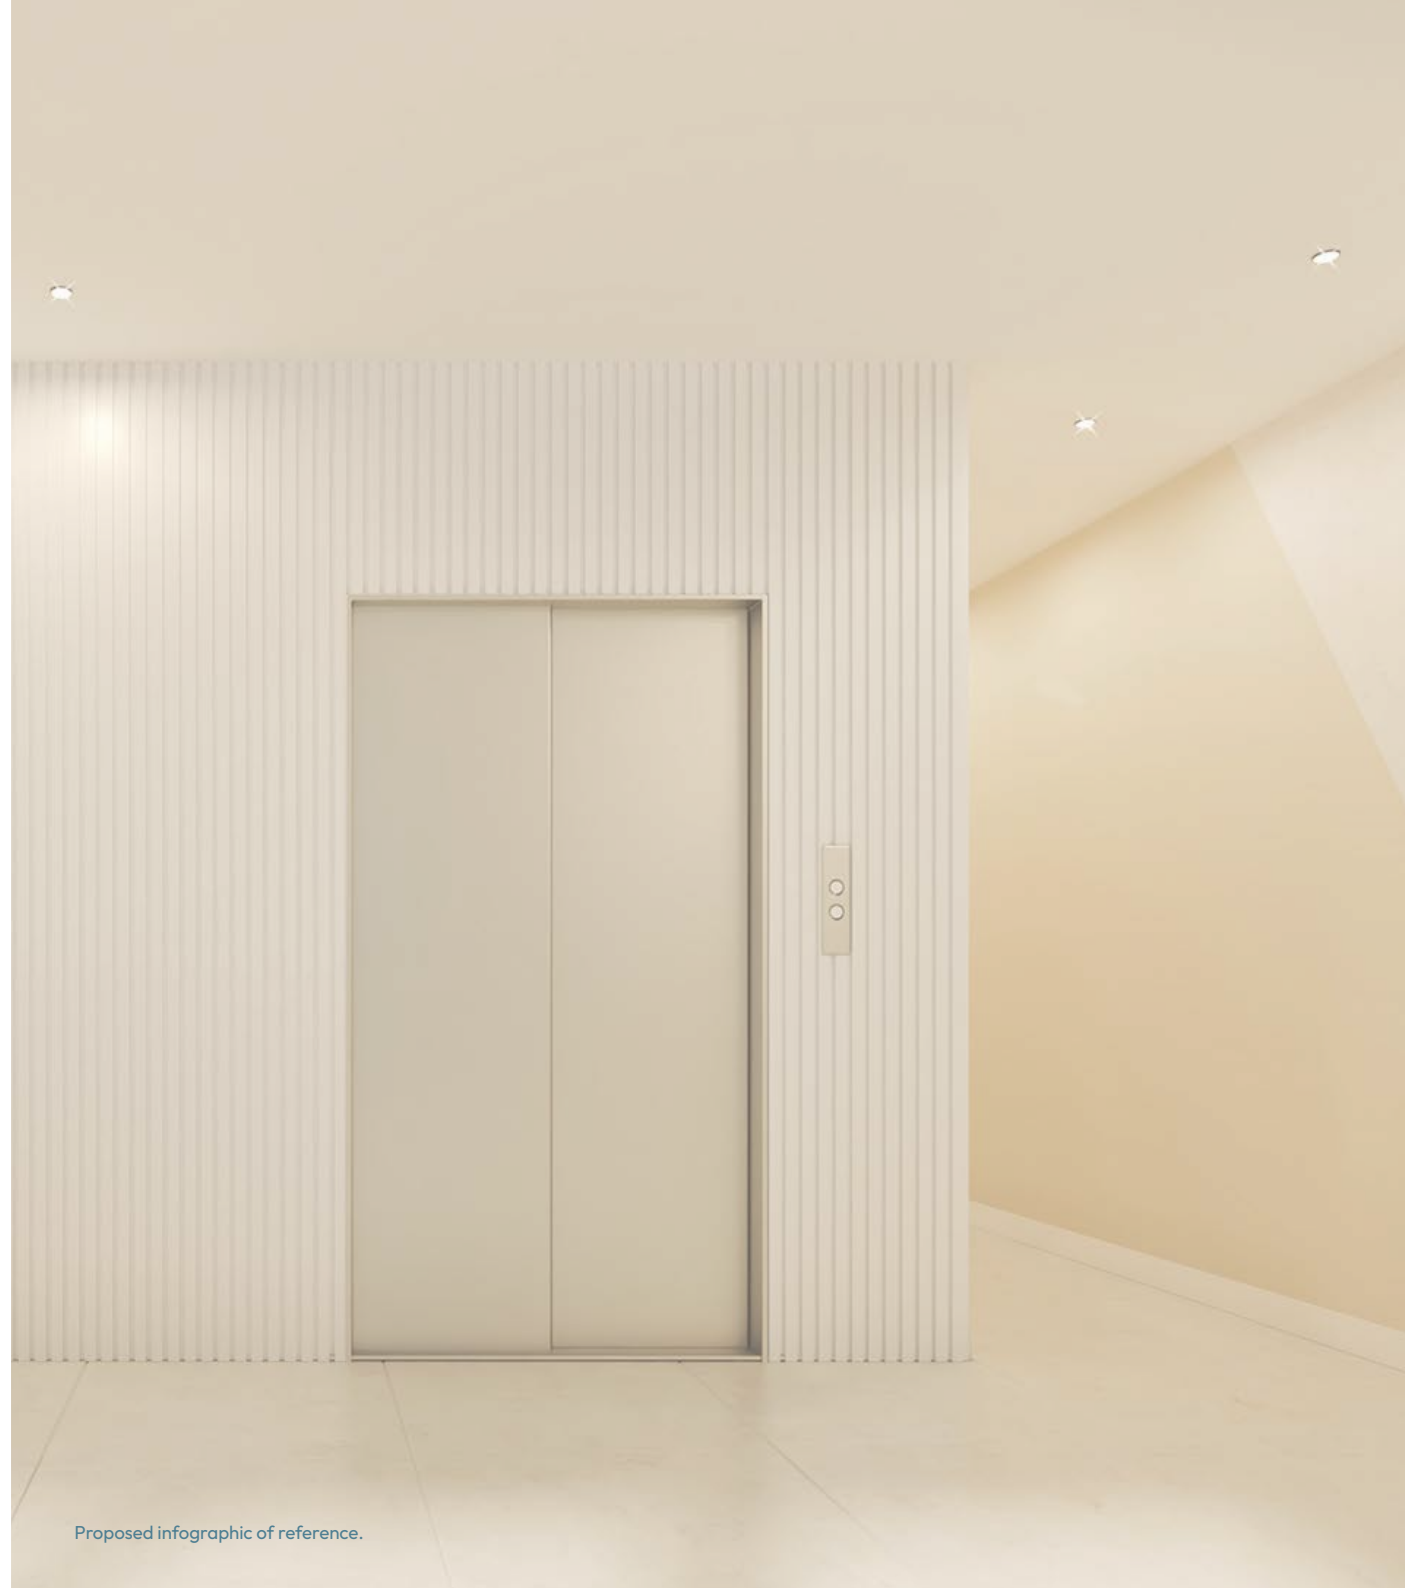

Fitness & working

WORKING SPACE

is a residential complex adapted to modern times and designed to meet all your needs. That's why we have created a coworking space with all the comforts and services for you to carry out your activities. Equipped with high-speed internet access, conference rooms, and relaxation areas, the coworking area becomes a space where you can work, network, and generate synergies in a modern and dynamic environment.

ZONA FITNESS

eatures a dedicated area for you to lead an active and healthy lifestyle. With a modern and comprehensive gym equipped with the latest fitness equipment trends, your home becomes your personal training center. Keep your body in shape without leaving home, enjoying top-notch facilities that make every day an opportunity to take care of yourself.

Lobby

CEILINGS AND FLOORING

Entrance lobbies decorated in a modern style and in perfect harmony with the residential architecture. With meticulous attention to detail and contemporary aesthetics, they will reflect the excellence and refined taste that characterizes Laguna Suites.

CEILINGS

Plasterboard panels with a finish in white plastic paint.

FLOORING

Porcelain flooring by GRATO, Mons Light.

Sustainability

Environmental commitment

CLADDING

Constructive envelope systems will be implemented to reduce the need for energy consumption in air conditioning:

ROOF

Inverted roof with extruded polystyrene insulation, waterproofing with asphalt membrane and gravel finish. The attic area will be finished with non-slip stoneware paving.

ORIENTATION

The orientation of the homes and their interior spaces is designed to optimize air conditioning needs.

FAÇADE

High-resistance façade system with excellent thermal performance that contributes to the building's energy efficiency. Exterior finish with decorative vertical grooves.

EXTERIOR CARPENTRY

The exterior carpentry of the homes will be lacquered aluminum with thermal break and double glazing with a dehydrated air chamber. Aluminum shutters in bedrooms and living rooms.
