

Embrace Nature

There is a place in the universe designed just for you, where the sunrises are spectacular and the sunsets are unforgettable. A place overlooking the Mediterranean, surrounded by pine forests, open to the horizon and the star-filled nights. We have called it and we have shaped it with the light and water of the Costa del Sol. Architecture in harmony with nature that exudes the avantgarde and sustainability.

“Nature on the doorstep, the city at a stone’s throw”.

The homes

the architects have focused on integration with the environment. Harmony with the landscape and luminosity were key in defining the interior layout. Light comes flooding in through large windows into a large social core where the living room, dining room and kitchen coexist, directly connected to the terrace, conceived as an open-air extension of the interior living.

At the same time, just as the position of the building guarantees the maximum privacy of each dwelling, the sleeping area groups the bedrooms in a separate area that preserves their privacy without interfering with the spaces allocated to leisure and meetings with friends and family.

also offers a wide variety of kinds of accommodations, with 2 and 3-bedroom homes, all of them with large terraces. A residential concept focused on well-being and enhanced by a superb orientation, high-quality materials and a home automation system that provides maximum comfort and efficiency in the use of resources.

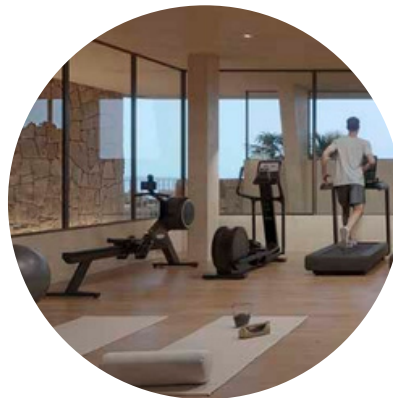

The common areas

approach conceives the common areas as a daily experience that allows residents to enjoy the Mediterranean lifestyle in their own home. Their design is based on a social vision of architecture, aimed at fostering community ties through a unique aesthetic that acts as a sign of identity.

Harmoniously integrated into the gardens and in perfect balance with the natural surroundings, there are two swimming pools, one outdoor and one heated, as well as a spa, a fully equipped gym and a comfortable coworking space with an office kitchen. A range of spaces carefully designed to promote healthy habits and active wellness behaviours.

Landscaping

combines the best of the urban environment with one of the largest green spaces in Torremolinos. This is why, when considering the landscaping of the residential development, we conceived a comprehensive sustainability design, based on the inclusion of native species that create a green mass in harmony with the outdoor vegetation.
